

BASX A-700 seven channel Power Amplifier

The BasX A-700 features a heavy-duty linear power supply, great sounding high-current short signal path Class A/B amplifier modules, a trigger input and output, and industry standard unbalanced audio inputs. It also includes audiophile-quality fault protection that's completely transparent in normal operation, yet protects the A-700 and your other equipment from common fault conditions.

The BasX A-700 is built to last, with a heavy-duty steel chassis, solid milled aluminium faceplate, and high-quality parts and construction throughout. The speaker outputs are heavy-duty five-way insulated binding posts that work equally well with bare wire, banana plugs, or spade lugs. Combine it with a surround sound processor like the Emotiva MC-700 at the heart of a great home theatre system, use it to upgrade the amplifier section of your AVR or to run the surround speakers in a big home theatre system; you won't be disappointed.
