

# SLIM

## Ultimate Slim Screen:

The Slim screen uses the same innovative magnetic bezel and front fabric mounting system as our Original Fixed frame screen but with a slimmer bezel. It's a very elegant screen with the width of the fascia matching the depth of the fascia. At only 39mm width, the velvet is wide enough to perfectly frame and enhance the contrast of any projected image, while also creating a clean low-profile appearance for a finer blend with room decor.

### Features:

- Reference Quality 4K Acoustically Transparent screen fabric
- Magnetic easy install screen facias with Ultimate Black Velvet finish
- Incredibly simple installation
- World-class packaging for secure transit and logical assembly
- Wide range of sizes in 10cm increments from 2.0m to 6.1m screen widths

**ULTRA HD**

## Introducing Ultimate Track

Ultimate Track is our unique fabric walling track, the most installer-friendly fabric walling system on the market. We've designed the track system to remedy many of the problems posed by existing track system designs. It's designed by Ultimate Screens and manufactured in the UK (all tooling, extrusions and packaging). Because of this we are able to better control the quality, lead time, cost and availability of our product. Packaged in tubes containing 23 linear metres of track.

### Ultimate Track features:

- Ultimate Track is designed for the UK and Europe using metric sizing. Our track has an 18mm leg height. This means that unlike many of the imported systems that are based on imperial sizes, the installer can use standard MDF or Plywood 18mm materials to create support structures for sockets, speakers or lights beneath the stretched fabric.
- One track for all applications: the thicker section profile and 18mm leg height allows our track to be used as both an edge and intermediate track profile.

One track for all applications!  
The use of a thicker outside leg allows the track to function as both a perimeter AND intermediate track

By using an 18 mm track height, standard 18 mm plywood or MDF can be used as a support backer to support TVs, lights, speakers etc

## Ultimate Track features:

- Ultimate Track is larger in profile to make everything easier. The 18mm leg height of our track means we have one of the largest fabric insertion channels available, making it really easy to tuck away excess fabric and multiple fabrics into the channel, speeding up installation.
- Ultimate Track's unique expansion guide on outer edge of our track means you can fit the track tight to a wall corner, but the required gap for fabric jaw expansion remains consistent.
- Ultimate Track's angled leg allows stitching screw to be added to secure track fully and adjust corner fit.

## Ultimate Track features:

- Ultimate Track is designed for quick and consistent installation. The larger base section and 45 degree bevel allow the use of powered collated screw guns (sometimes known as drywall guns). These tools have belt fed screws, allowing simple one handed quick installation of the track system.
- Ultimate Track has a thicker extrusion profile allowing it to be screwed to the wall without the need for pre drilling.
- The extra width of the Ultimate Track system makes it simple to overhang the track to create a hidden channel for LED lighting.

The extra width of the Ultimate Track system makes it simple to overhang the track to create a hidden channel for LED lighting

The extra wide track allows the use of automatic collated screw guns for the quickest installation

Extra thick track construction allows track to be screwed-in without pre drilling and adds to track strength and durability
