

Emotiva XPA-11 Gen3

IN HOME CINEMA'S 3D sound era, where a 7.1.4 speaker system is the dream, Emotiva's XPA-11 Gen3 amplifier comes to the rescue. Utilising Class H amplification and switchmode power supplies for its 11 channels – including a trio of 300W-rated independent 'High Power' modules for its L/C/R output – it rises to the demands of a film soundtrack

without missing a beat. And while effortlessly capable of blunt force trauma, its sound is also tight and responsive, making it an ideal partner for a high-performance processor. Behind the milled aluminium face-plate lies a multichannel amp of considerable talents ...at a bargain price.
