

# SVS

## SB16-Ultra

FOR AN AUTHORITATIVE and largescale sub-bass experience to accompany your movies, SVS's mightily impressive SB16-Ultra is an essential audition. A newly designed 16in bass driver, claiming a massive 3.7in excursion, is partnered with a 1500W Sledge DSP amplifier, and the result is a thrilling combination of slam, speed and precision, with a low-frequency extension that unearths the deepest soundtrack details. Enjoyment can be tailored, too, via SVS's control app that offers parametric EQ adjustment and one-touch Movie and Music presets. The SB16-Ultra may be big – but it's also brilliant.
