

GoldenEar Triton Reference

AN IDEAL INTRODUCTION for UK audiophiles to this US brand, GoldenEar's near-1.5m tall tower is a three-way floorstander with a built-in active subwoofer. The slender profile conceals no fewer than three powered bass units and four ABRs, two upper-bass/mid drivers and a HVFR (High-Velocity Folded Ribbon) tweeter. It paints an impressive sonic picture, combining massive bass weight with a nimbleness and resolution of subtle musical detail that's enthralling. It unleashes considerable room-shaking power in larger rooms, yet is equally adept at making music without 'over-driving' smaller spaces.
