

OFFICIAL EISA AWARD CITATION FOR:

EISA WIRELESS ON-WALL LOUDSPEAKERS 2022-2023
System Audio legend 7.2 silverback

By integrating amplification, DSP and a wireless module based on the hi-res-capable WiSA platform, System Audio's passive legend 7.2 loudspeaker is transformed into something unique in its 'silverback' guise. On-wall installation means this slim cabinet won't clutter up an interior, while also giving an acoustical boost to its pair of 5in bass/mid drivers. Wired playback remains an option, but marry the speaker to System Audio's optional Stereo Hub and it becomes easy to stream music via AirPlay, Bluetooth, Chromecast or Spotify Connect. This compact box also offers built-in room correction to improve sound performance, and a plethora of inputs for external sources – all without a loudspeaker cable in sight!
